

Board Number	IC Number
EV12A2-B-01A	SCT12A2

PERFORMANCE SUMMARY

Specifications are at TA = 25°C

Table 1. Performance

Parameter	Condition	Value
Input Voltage	DC up to 20V	2.7V-20V
Output Voltage	JP3: ON PWM	15V ± 2.5%
Output Current	Continuous DC current	2A
Frequency	Default	400KHz

QUICK START PROCEDURE

Evaluation board EV12A2-B-01A is easy to set up to evaluate the performance of the SCT12A2. Refer to Figure 1 for proper measurement equipment setup and follow the procedure below:

1. Place jumpers in the following positions:
 - JP3: ON Connect EN pin to V_{CC} to enable IC.
2. With power off, connect the input power supply to J1 V_{IN} connector and J2 GND connector. Turn on the power at the input. Make sure that the input voltage does not exceed 14V, and supports sufficient current limit.
3. Check the output voltage at J3. The output voltage should be 15V typical. Once the proper output voltage is established, adjust the load within the operating range and observe the output voltage regulation, output voltage ripple, efficiency and other parameters.
4. To use the enable function, apply a digital input to the EN pin of JP3.

NOTE.

When measuring the voltage ripple, care must be taken to avoid a long ground lead on the oscilloscope probe. Measure the input or output voltage ripple by touching the probe tip directly across relevant capacitor of V_{IN} or V_{OUT} . See Figure 2 for proper scope probe technique.
